Revising The Value Models For The Marine Forces Reserve Supply And Maintenance (SMAT) Inspection Program Author: MAJ Ivan Er, Army

Advisor: Dr. Alejandro S. Hernandez

Objectives

This thesis examines the inspection system that the MARFORRES G-4 (Logistics) has developed to support the MARFORRES mission with the following objectives:

- 1. Review the existing value models to reflect the true value of the inspection program.
- 2. Validate the value models to articulate the contributions of the SMAT inspection program
- 3. Describe the utility of value models for resourcing decisions

Methodology

An objectives hierarchy using the Systems Decision Process (SDP) framework was developed to account for the key objectives and metrics that are important to the stakeholder (Figure 1). The value derived from the performance of each metrics are represented through quantitative value modeling. The inspection findings of the metrics of each units are converted into raw value scores (RVS) using the value curves developed. The RVS are subsequently transformed into weighted value score (WVS) using the measure weights that represent the stakeholder's inputs. This WVS is then computed for the total value score of each units and compare against a performance metric (Table 1).

Research Results

The total value score represents the value that the unit would gain from the inspection and thereby the value that MARFORRES would gain from the unit being inspected (Table 2).

	Table 1. I chormanee matrix of mspeetion program							
Value Score		Color Code		Definition				
10 to >8 points		Has significa		ant impact towards supporting				
		the MARFO		RRES mission.				
8 to >6 points		Has conside		rable impact towards				
		supporting		the MARFORRES mission.				
6 to >5 points		Has limited		impact towards supporting				
		the MARFO		RRES mission.				
5 points and below			Has negligible impact towards support					
		11 1	the MARFORRES mission.					
Table 2. Overall value scores for MARFORRES units								
Unit	Ov	erall Valu	te Score	Value to Unit Mission				
Α		5.0		4				
В	5.2			3				
С	4.2			4				
D	4.9			4				
E	5.4			3				
F	5.7			3				
G	6.9			2				
H	5.9			3				
Ι	5.7			3				
J	7.3			2				
K	5.2			3				
L	6.9			2				
M	6.2			2				
Ν	6.4			2				
0	6.5			2				
P	7.4			2				

Table 1. Performance matrix of inspection program

required modification as part of modification instruction (MI)	total equipment that required calibration in the calibration report	stages exceeding 96 hours against the total equipment allowanace	demands against the total documents in the due and status file (DASF)	and child pairing against the total number of parent and child pairings	against the to equipment allowance
--	--	--	---	--	--

Figure 1. Objective Hierarchy of SMAT inspection program Application

The utilisation of value models in conjunction with an optimisation program was demonstration in scheduling SMAT inspections of MARFORRES units. It have shown that the logisticians can use the resources more efficiently to select units for inspections that will have the greatest contribution to the MARFORRES mission.`
